Secure connection technology – Smart and proven in practice and workshop environments

The right connection element for every application – whether rectangular, variable-angle, flexible, internal, vibration-resistant, torsion-resistant.

The connectors break the anodized coating of the profiles. This way, a conducting connection is established between the profiles to comply with the requirements for applications in ESD-sensitive environments (ESD – Electro Static Discharge).

SIGNAL GRAY

The signal gray (RAL7004) color variant meets the market requirement for a subtle color scheme for fixtures and therefore provide the application with a harmonious and calm appearance. The low-contrast aluminum structure forms the optical background and leaves open room for customer-specific design elements.

ESD BLACK

As the only modular profile system on the market, Rexroth offers all standard and ESD accessories in gray and black. The conductive plastic components can discharge voltage and ensure equipotential bonding in the frame. The showstopper: Black ESD components make it easy to visually distinguish ESD applications from non-ESD applications.

designLINE – THE PERFECT COMBINATION OF QUALITY AND FUNCTION

You value good design? The *designLINE* version of our proven die-cast connectors features an impressive and high-quality appearance. Thanks to special pointing in “RAL 9006 white aluminum”, the appearance of your application is further improved by visually seamless adaptation to aluminum profiles. The paint is also scratch-resistant. A special highlight: The ESD-compatibility of connections is maintained.

Systematic safety – playing it safe from the start

Thanks to the overall system of the Rexroth modular profile system, accident risks are avoided and safety regulations reliably complied with.

There are numerous hazards in any modern work environment and particularly where they are expected the least. A lack of safety in production, assembly or storage facilities poses a risk of death for personnel.

Severe accidents may have unexpected consequences for the liable manufacturer of equipment or the equipment owner.

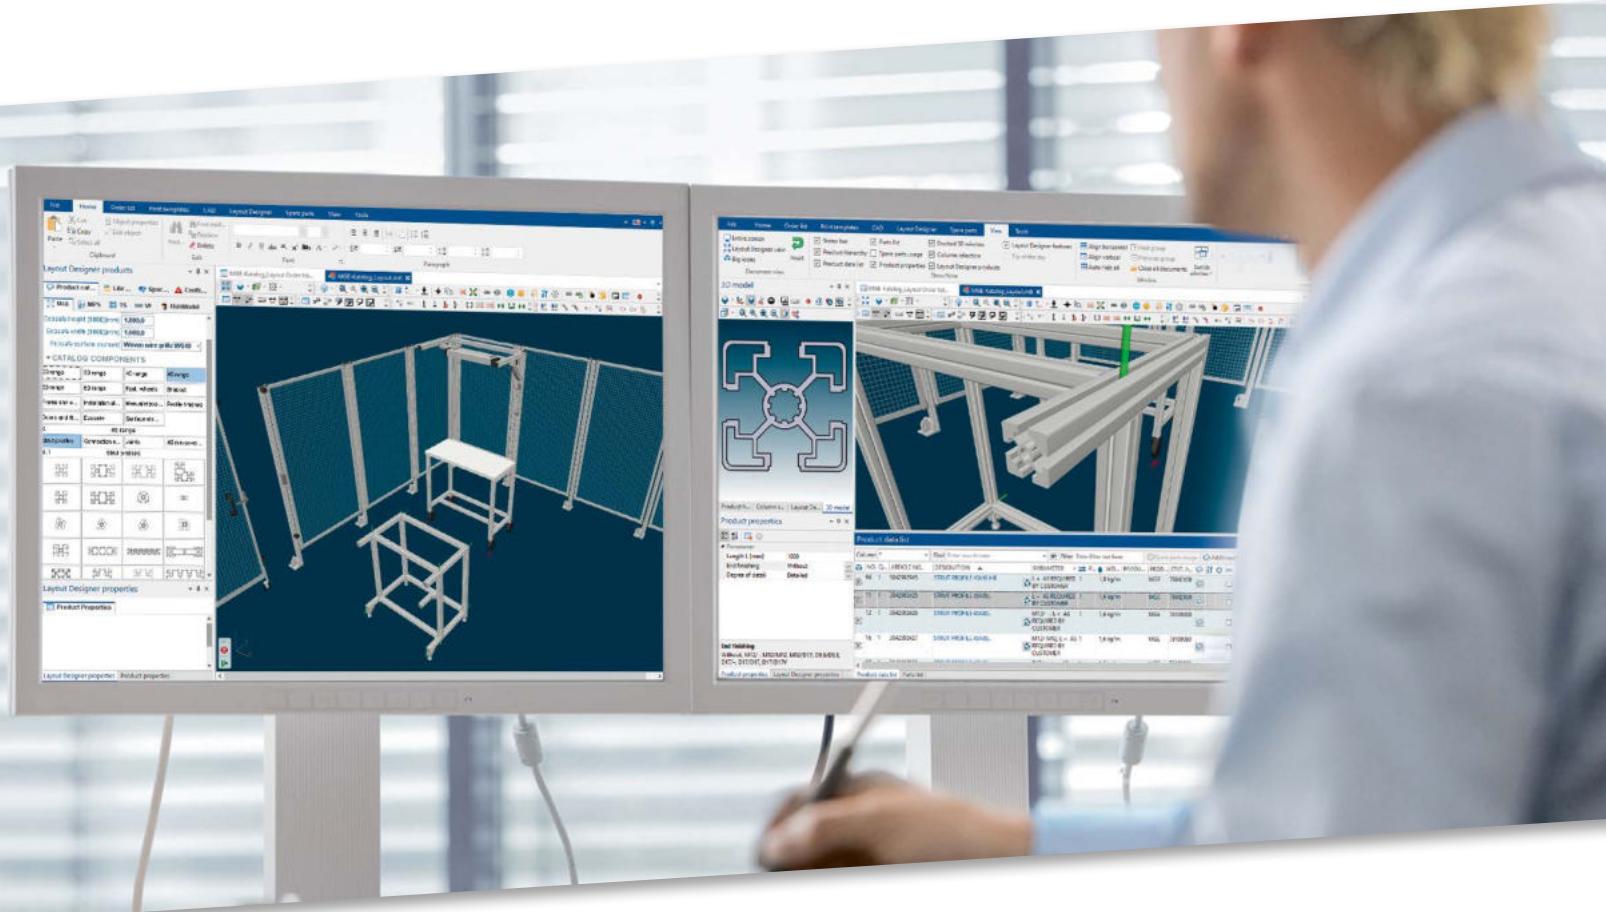

Operational safety of equipment is a serious topic within the responsibility of the company and the facility owner. In most countries, these positions are also liable.

Legal regulations, product regulations, certifications, regular checks and verifications and documentation are comprehensive requirements. We are aware of them and offer our support.

Maximum planning security with MTpro planning software

Strut profiles

With more than 120 strut profiles for all types of loading, Bosch Rexroth AG offers the widest product range for different demands:

- ▶ Square and rectangular profiles
- ▶ Light profiles with optimized cross-sections
- ▶ Round profiles and profiles with smooth lateral surfaces

Connectors with high load-bearing capacities combined with ultra robust slots and large central bores make profile connections possible which can handle high static and dynamic loads.

Bosch Rexroth AG offers you six different profile ranges. All profiles within one profile range have the same slot dimensions and spacing to ensure perfect coordination during construction.

Due to their high degree of robustness, the 10 mm slotted profiles are suitable for constructions ranging from tables to heavy machine frames. They are available in four profile series with a slot spacing of 40 mm, 45 mm, 50 mm, or 60 mm.

The profiles with 8 mm and 6 mm slots are used in the construction of lightweight equipment, partition walls, stands, or showcases.

Profile length in profile packaging units (📦)

The stated length of the profile packaging units relates to the guaranteed usable length.

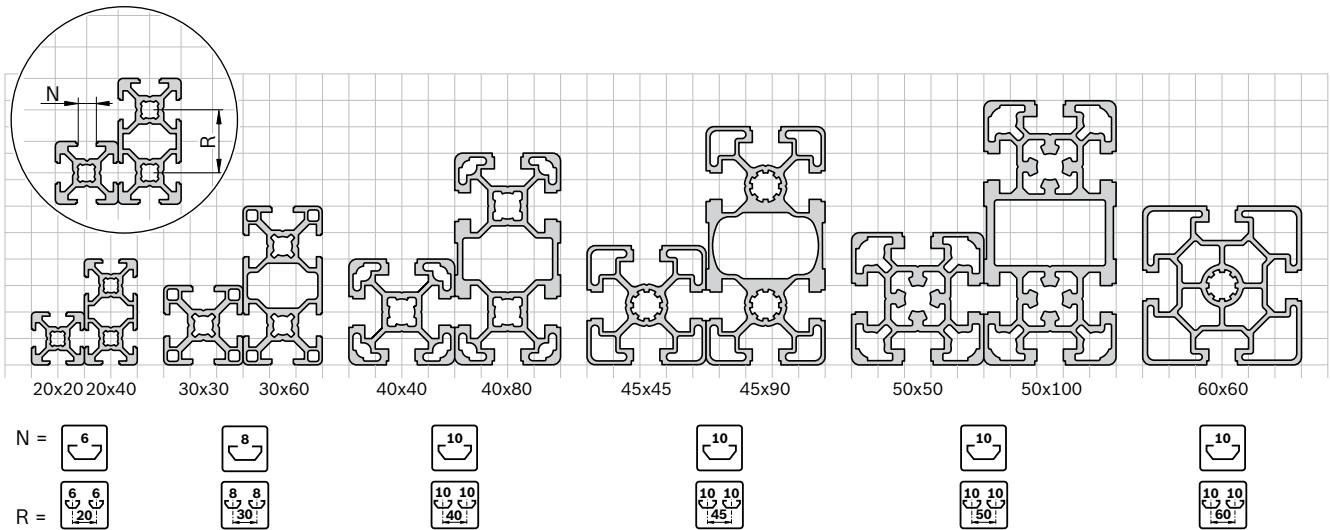

During anodizing as part of the manufacturing process bare areas which are approx. 30 mm long are left at each end of the profile (= contact areas), so the profiles are generally supplied incorporating an excess length of 100 mm.

Example:

| 45x45L | L (mm) | No. |
|--------|--------|---------------|
| 20 pcs | 6070 | 3 842 553 611 |

Notice: The length dimension "L" in the table equals the usable length, whereas the actual length is approx. 100 mm longer.

Strut profiles – slot sizes and modular dimensions

Slot size N = 6 mm, 8 mm, 10 mm

Modular dimensions R = 20 mm, 30 mm, 40 mm, 45 mm, 50 mm, 60 mm

Profile finishing

Profile finishing is required whenever interlocking connectors are used. Bores must be added for bolt connectors or threads cut in central bores, for example. This requires machining with standard dimensions.

Example: 40x40L

Standard profile finishing with fixed material numbers

For certain profiles, you can receive selected profile finishing with a fixed material number. This is the easiest way to order the appropriate profile finishing for our proven interlocking profile connectors.

The available profile finishing is shown in pictograms in the order tables.

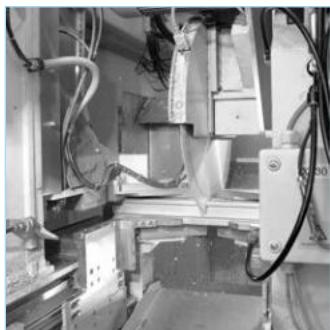

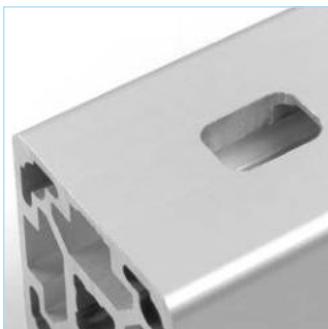

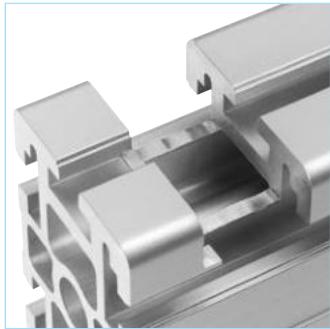

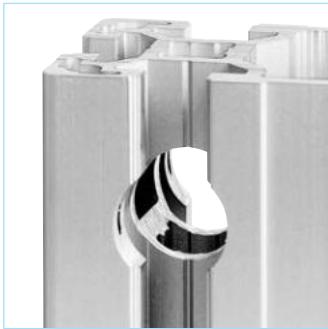

For more information on the available profile finishing, see page 18-2.

eShop and MTpro – software tools for designers, planners, and purchasers

We offer:

- ▶ Customer-friendly configuration
- ▶ Generation of 3D CAD models for designers
- ▶ Drawings at the press of a button
- ▶ Integration of frames/profiles in layouts
- ▶ Easy ordering at the click of a mouse

Profile finishing

Rexroth offers you numerous connection options for putting strut profiles together.

The wide variety of connector types is due to the differing demands made of the applications:

- ▶ Right-angled
- ▶ Variable-angle
- ▶ Internal
- ▶ Torsion-resistant
- ▶ Vibration-resistant
- ▶ With or without profile finishing

If you require a finished profile, it can be provided for you in an installation-ready form.

When you select the corresponding material number the profile is provided in cut, burr-free form, or alternatively fully finished with drilled holes or threads.

This eliminates risk for you and reduces your production workload.

If you wish to undertake the finishing yourself, here are a few tips:

Saw and saw blade

Segmental metal circular saw blade, carbide-tipped

Number of teeth: 92 or 96

Rotational speed: at least 2500 rpm

Finishing of central holes

As a rule, the threads can be directly formed and cut, but countersinks facilitate their production. The central holes of the strut profiles are designed for the following thread manufacturing processes.

| Threads | Finishing | Notices |
|------------|----------------|----------------------------|
| M6 | Thread forming | - |
| M8 | Thread forming | - |
| M12 | Thread cutting | - |
| M16 | Thread forming | pre-drilling in some cases |

Drilling jigs

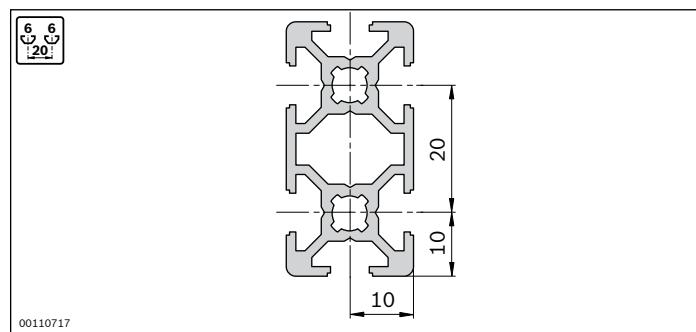

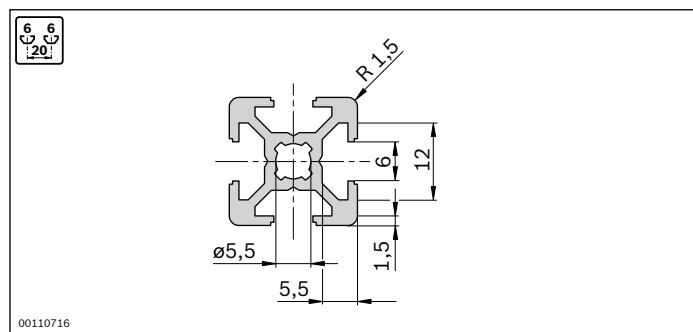

In the tools section you will find useful drilling jigs for the Rexroth standard finishes (p. 14-2).

Strut profiles with 6 mm slot

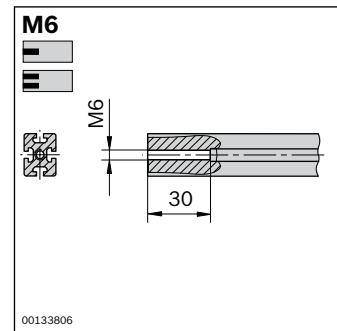

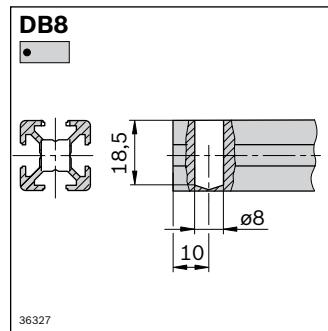

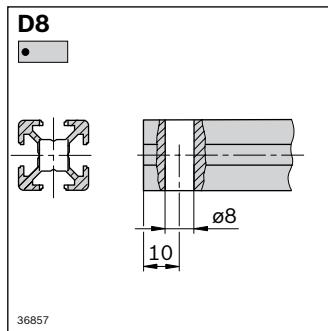

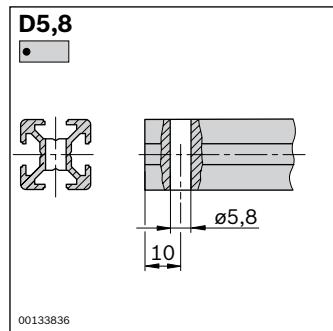

Strut profiles with 6 mm slot for light structures, suchas supports and lab fixtures.

The 20x40 and 20x60 profiles are especially suitable for reinforcing; the 20x40x40 profile is suitable for constructing showcases, flow racks, and enclosures.

Strut profiles with 10 mm slot

The Rexroth modular profile system, with 10 mm slots in the modular dimensions 40 mm, 45 mm, 50 mm, and 60 mm, covers all conventional profile dimensions on the world market.

Thanks to their computer-optimized design, the strut

profiles L with 10 mm slot (modular dimensions 40 mm, 45 mm, and 50 mm, e.g. 50x50L) combine high strengths with minimum use of materials. This gives you a cost-effective and stable solution for the construction of tables, protection devices or frames, for instance.

Slot, modular dimensions, central bore

* The following L-profiles have a “heavy” slot geometry:
45x90x90L; 45x90x90L 4N; 90x90L; 90x90L 4N; 90x90L 4NVS; 90x180L

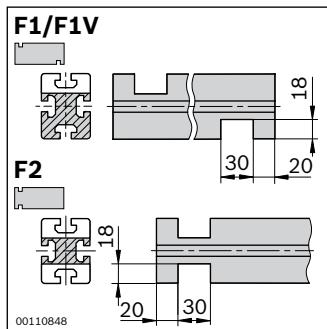

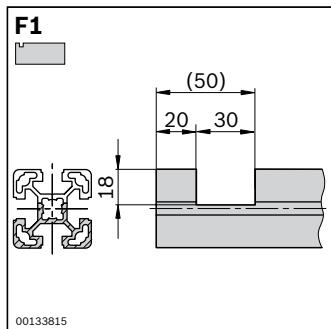

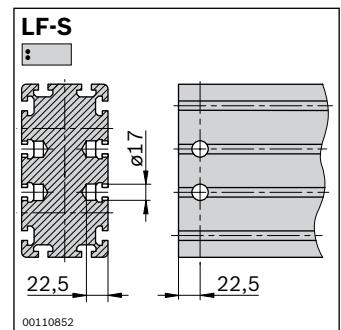

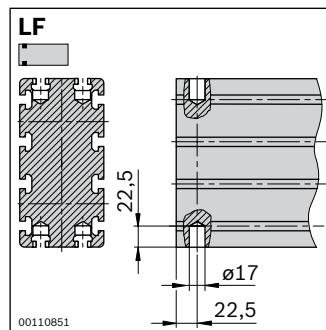

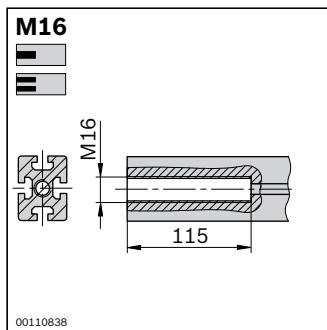

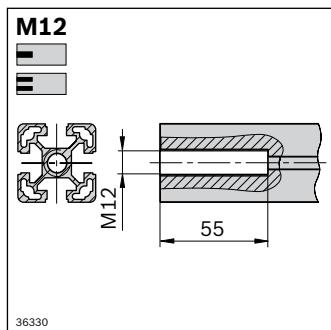

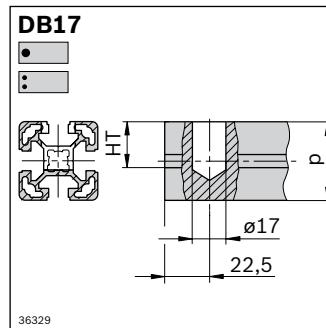

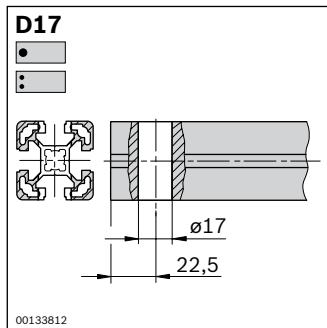

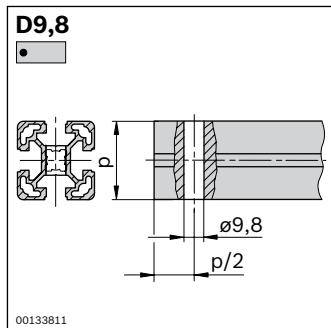

Reduced maximum profile lengths $L_{max,i}$ at customized profile finishing

| L_{max} (mm) | $L_{max,i}$ (mm) |
|----------------|------------------|
| 6070 | 5400 |
| 3000 | 2300 |
| 2000 | 1300 |

For applications with high loads, we recommend especially stable profiles with 10 mm slots, e.g. for heavy work tables, fixtures, machine frames, transport shuttles, protective enclosures, and handling systems.

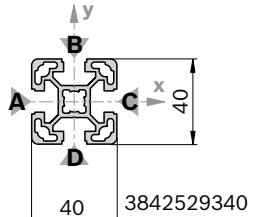

Due to its very sturdy design, this slot allows maximum strength connections.

- ▶ Rexroth **strut profiles** can be used as compressed-air lines and reservoirs. The hollow chambers or central holes are used
- ▶ **Flanged plate** for end closing of profiles (p. 5-3)
- ▶ Compressed-air intake or discharge at the flanged plate, **connection piece**, or **connection screw fitting** (p. 5-4)
- ▶ Air-tight connecting of profiles with **longitudinal end connectors** or **T-connectors** (p. 5-6, 5-5)
- ▶ The use of the heavy-duty profiles is preferable in the case of more demanding leak-tightness requirements (e.g. for underwater applications)

Flanged plate

- ▶ For sealing the ends of the hollow chambers. This enables the profiles to be used as a compressed-air line
- ▶ For compressed-air introduction or removal when screw plugs are replaced by pneumatic screw fittings
- ▶ Profile finishing: M12 thread cutting in the central holes
- ▶ For a maximum pressure (p_{max}) of 8 bar

Eliminate safety risks in manufacturing and production by using the components for Rexroth protective devices. EcoSafe protective fence components are flexible to use and help comply with current standards and guidelines. Pre-assembled protective frames, door kits, and a well thought-out overall product range ensure fast planning as well as economical and practical implementation.

Individual protective devices such as enclosures and additional attachments can be created using the tried and tested Aluminum Structural Framing components. These two systems are mutually compatible. Rexroth therefore offers a comprehensive, overall solution for all requirements.

Compliance with standards

DIN EN ISO 12100 – Safety of machinery

- The protective fence must be designed so that it can only be opened with the aid of,, or by destroying, the fastenings.
- The actual design requires a risk assessment to be carried out according to DIN EN ISO 12100-1 in every case

DIN EN 953 – General design and construction

requirements

- Rigidity, impact resistance, strength & durability of connection points, etc.

DIN EN ISO 13857

- Safety distances to prevent hazard zones being reached by upper and lower limbs

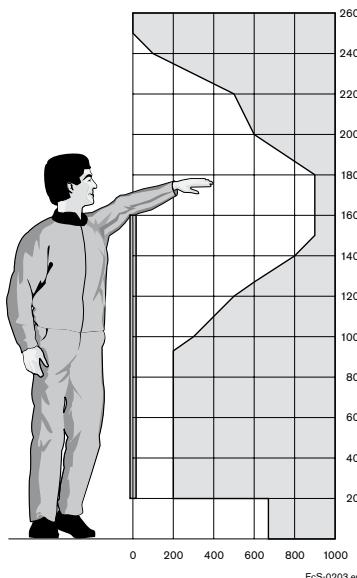

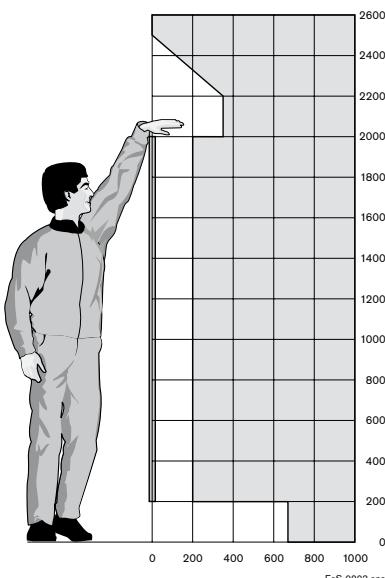

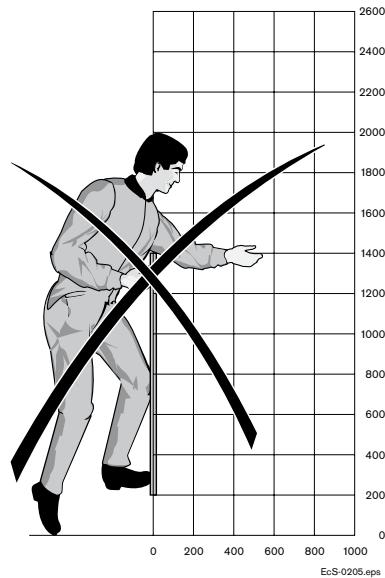

DIN EN ISO 14120

- Safety of machinery – Guards – General requirements for the design and construction of fixed and movable guards
- Rexroth protective frame tested according to pendulum test Appendix C and passed

Machinery Directive 2006/42/EC

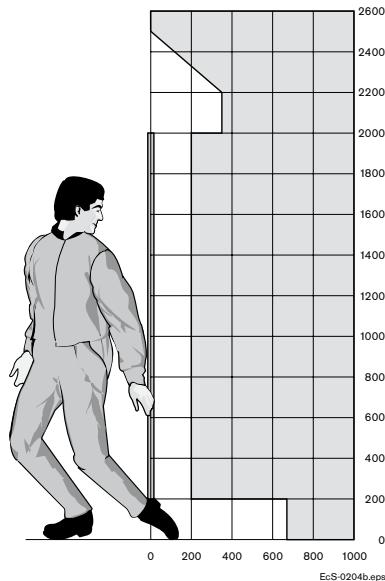

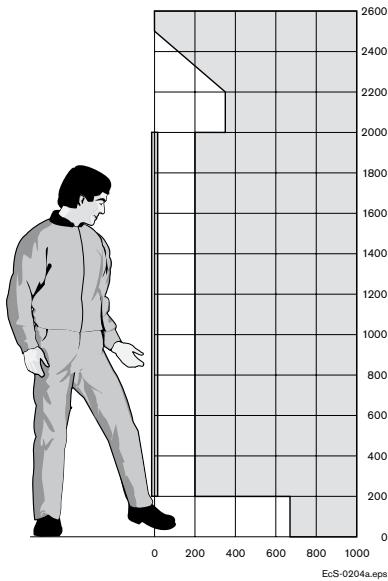

Excerpt from the requirements that apply to protective devices:

- must be solidly built
- must be securely held in position
- must not cause any additional hazards
- must not be able to be easily circumvented or rendered ineffective
- fastenings must only be able to be undone or removed with the aid of tools
- Once the protective devices have been removed, fastenings must be remain attached or fastened to the protective devices or the machine

Safety distances $H = 1600 \text{ mm}$  $H = 2000 \text{ mm}$  $H = 1400 \text{ mm}$

The safety distances depend on the height of the protective device and the openings in the protective grille. If woven wire grilles with a mesh width of 40x40 are used, only a safety distance of 200 mm from the hazard area is required. The standard fence height of 2000 mm provides

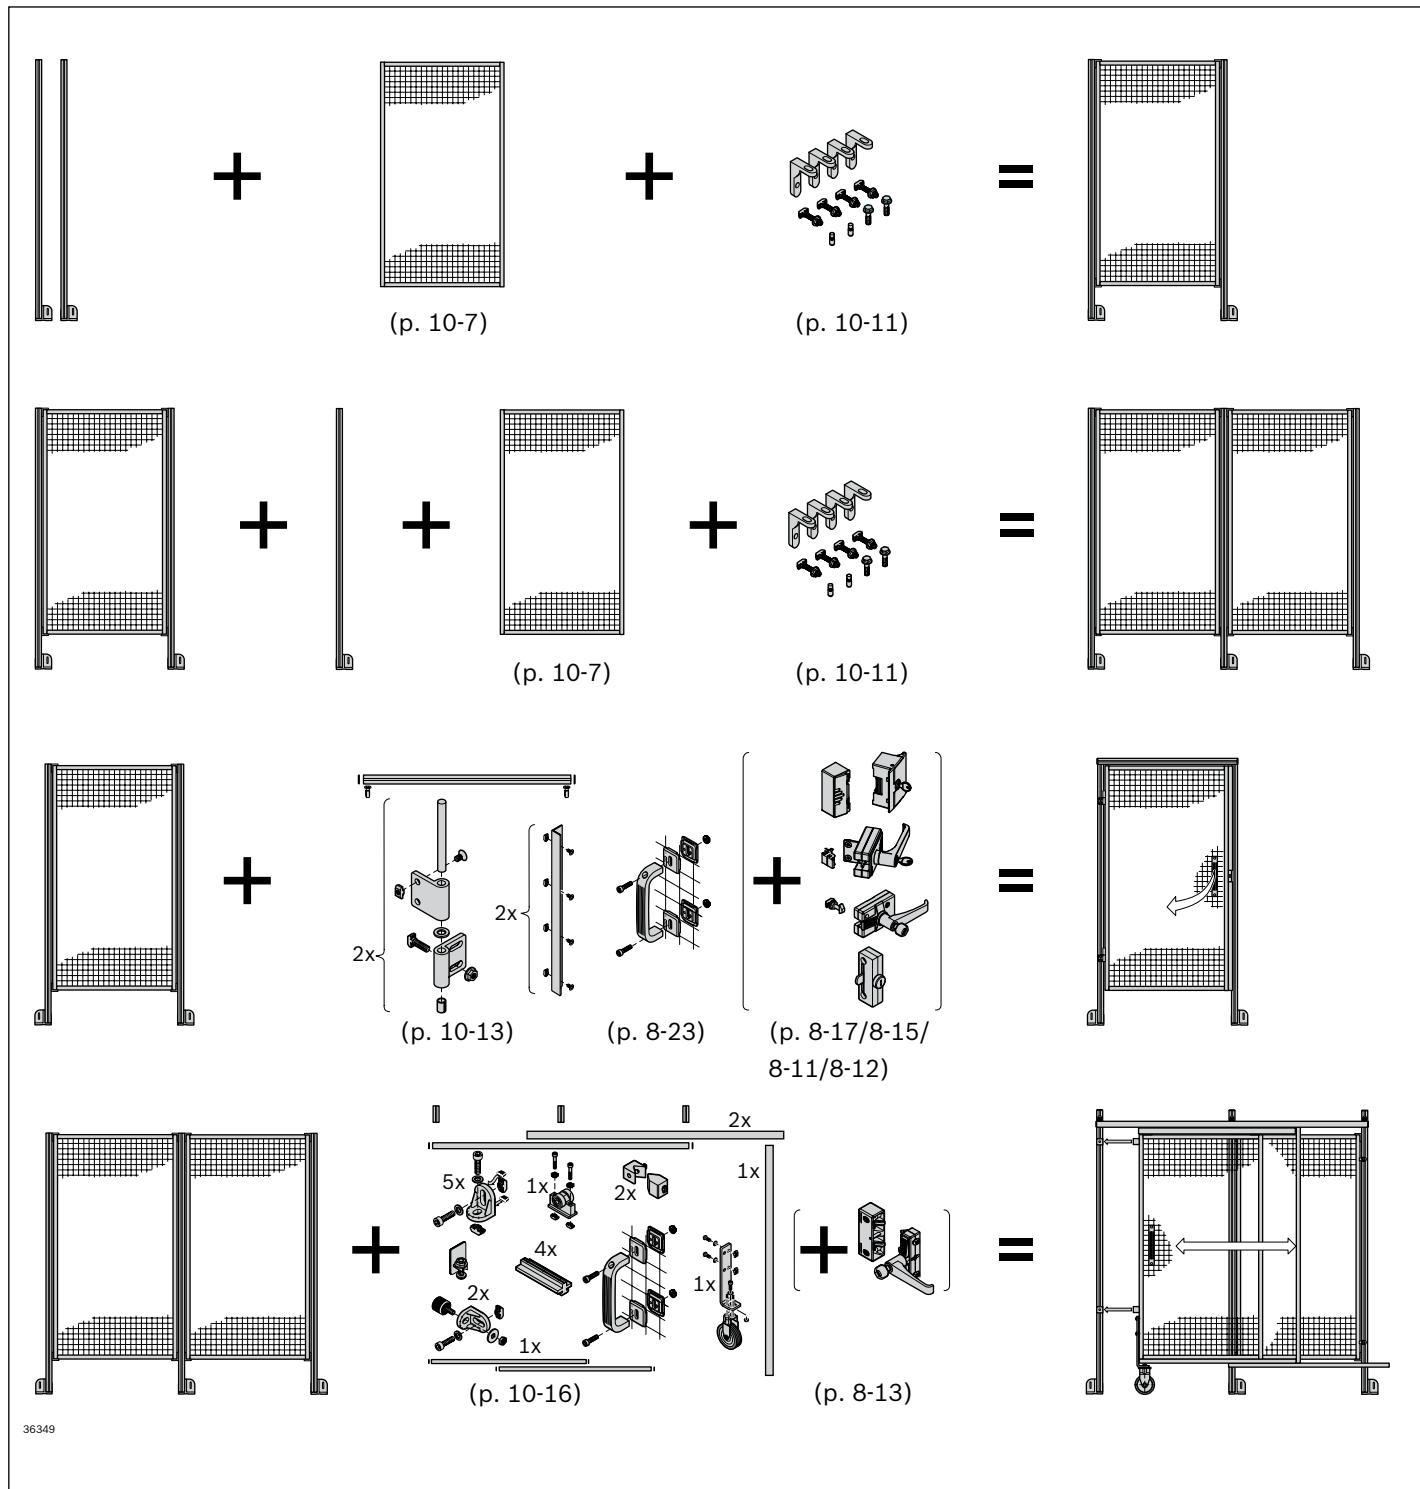

adequate protection in conjunction with a relatively small safety distance. The graphics show a profile with the safety distances for 2 different system heights (DIN EN 13857). Protective fences of under 1400 mm in height do not provide adequate protection for personnel.

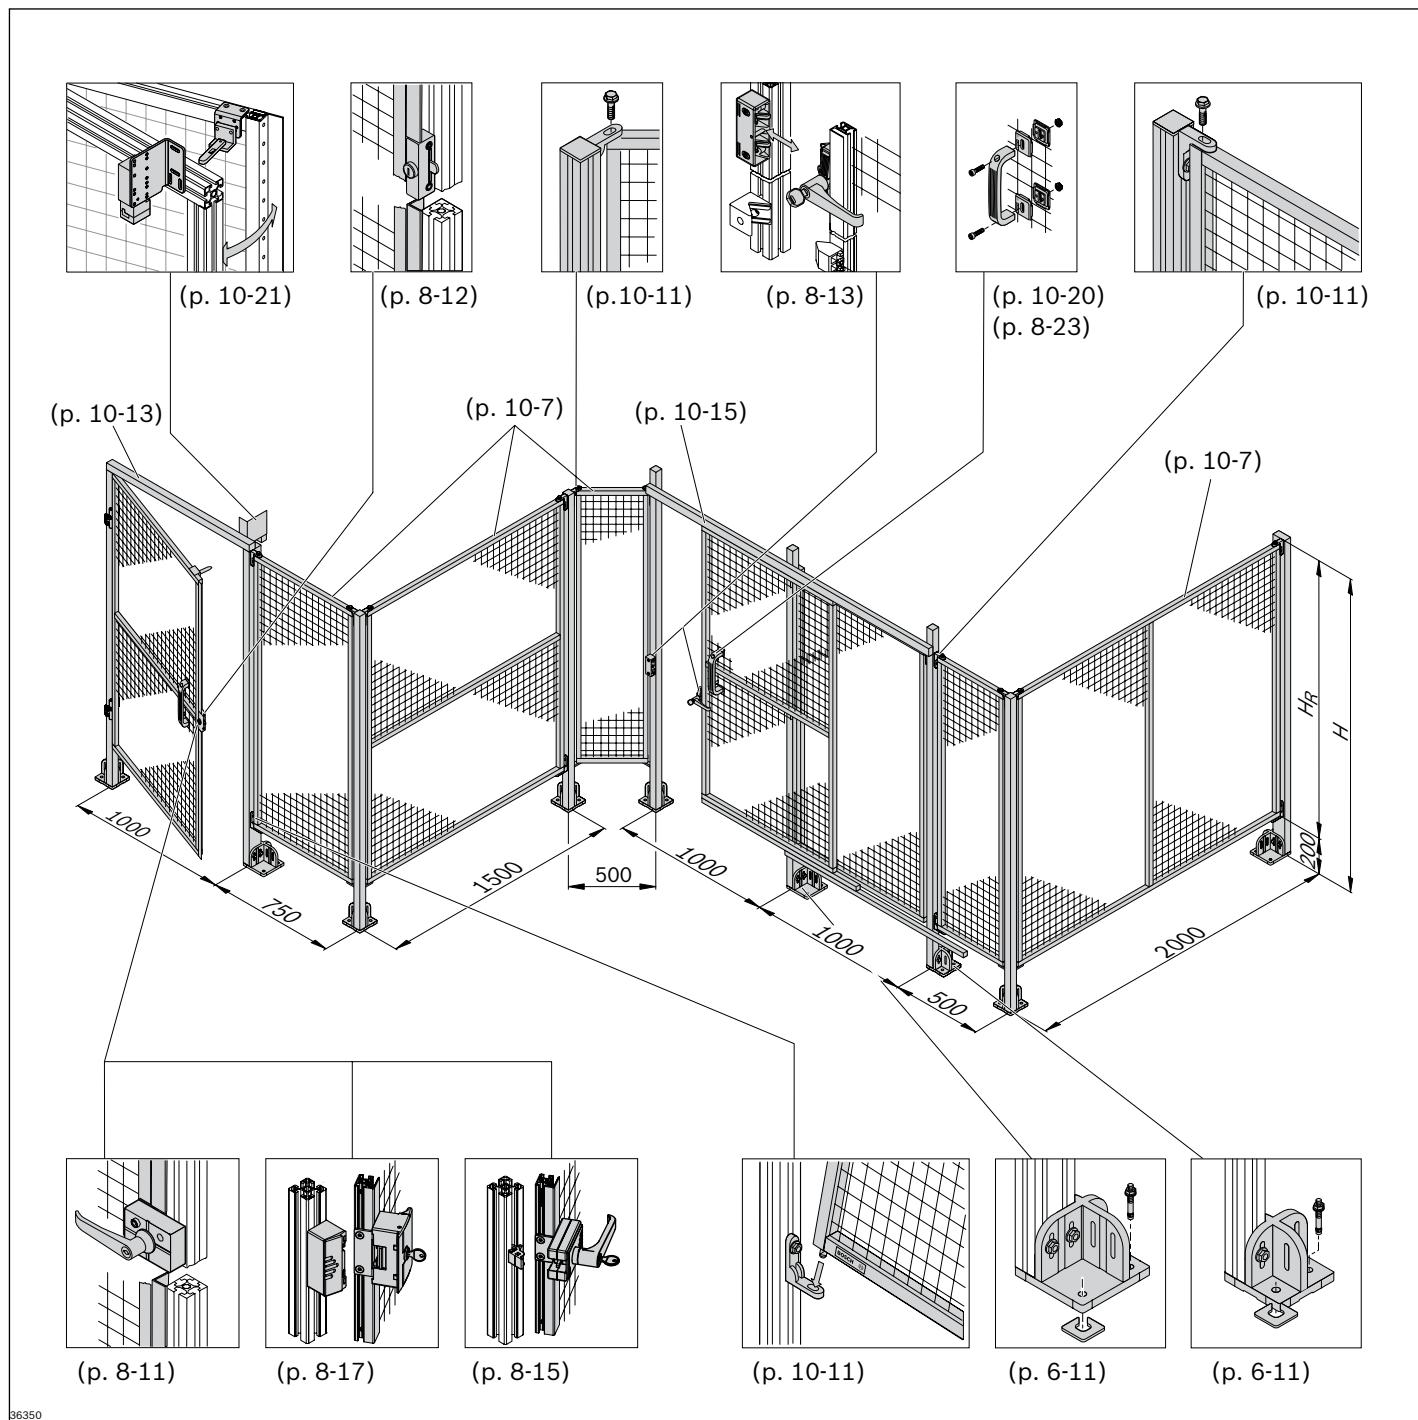

Safety distances where there is 200 mm ground clearance

The standard distance between the protective frame and the ground is 200 mm. This gives a distance from the hazard area of 665 mm. According to the standard, openings that are

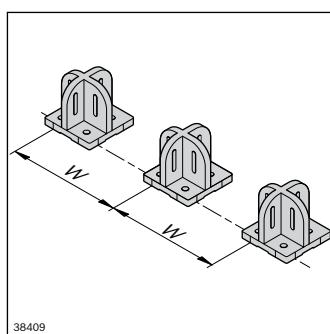

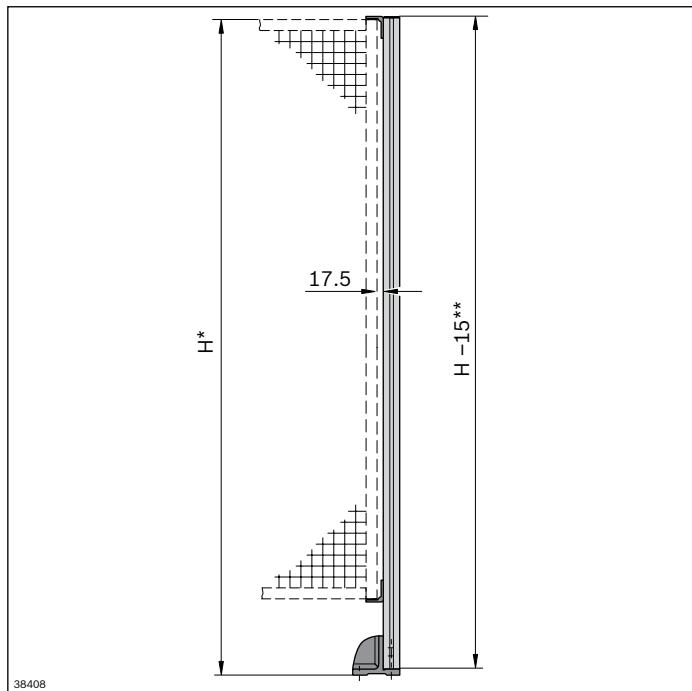

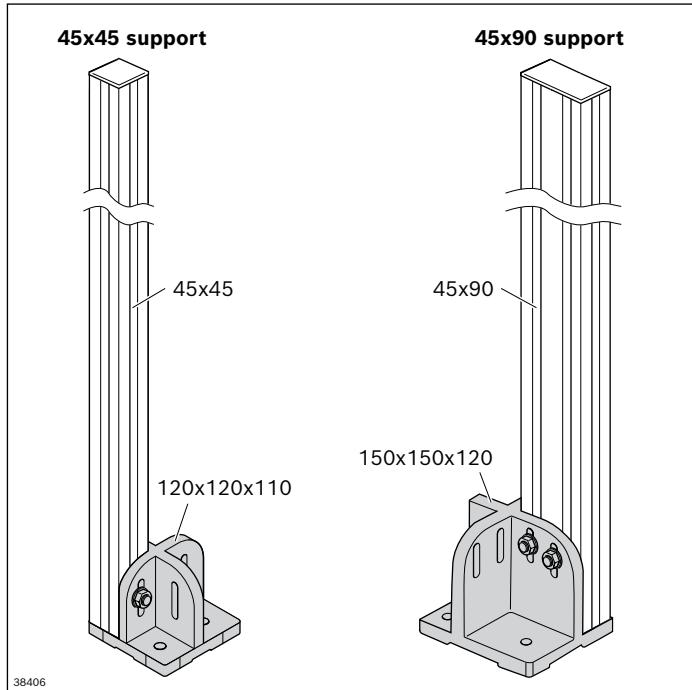

larger than 180 mm allow the whole body to fit through. Depending on the customer's requirements, the distance from the ground may have to be reduced to <180 mm.

Linear guide drives

Drive concept

The linear guides are driven via the hollow shaft in the drive head. The drive head is used to directly install a motor or alternatively (in connection with a plug-in shaft) a hollow shaft gear or a coupling. Depending on the desired speeds of movement for the application, it is necessary to use various motor types in conjunction with intermediate gears. Due to the multitude of drive components available in the market, there are a large number of possible combinations.

The MGE modular profile system makes it easy to assemble Bosch Rexroth linear guides through the use of a standard shaft and simple connection dimensions.

Fastening

The drive head is directly secured on the profile by means of longitudinal end connectors.

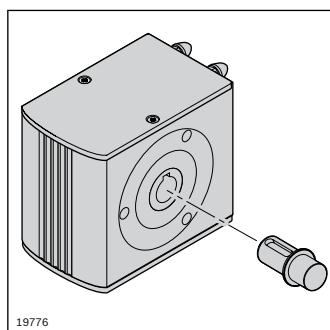

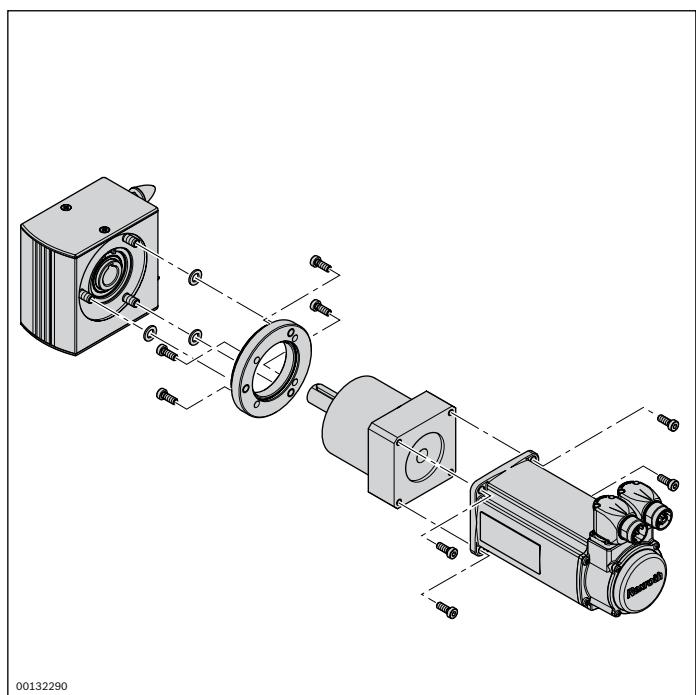

The motor, or the intermediate gear flange, can be screwed to the drive head as a complete unit from the left- or right-hand side.

Synchronous shafts

The use of synchronous shafts (p. 13-47) enables several linear axes to be operated with one drive.

Connection dimensions (flanges)

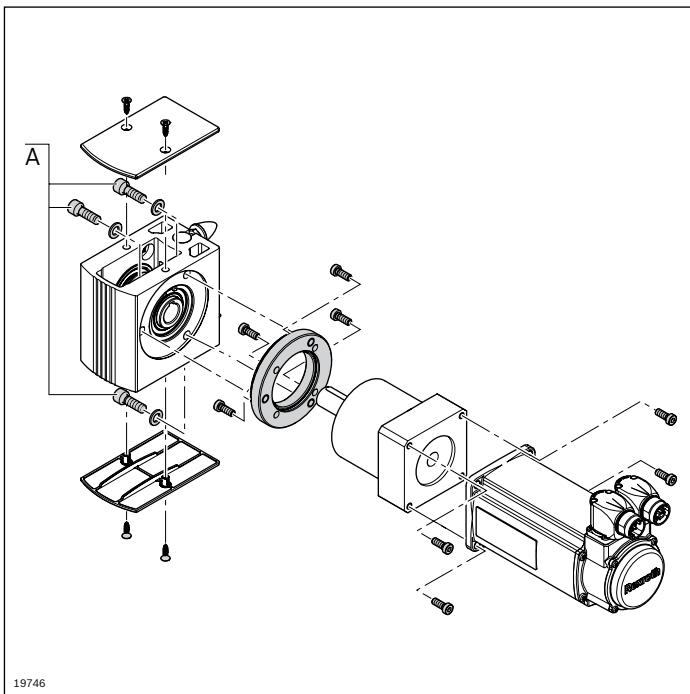

The connection dimensions for the size LF6, LF12 and LF20 linear guides are shown on pages 13-45.

Flange

A flange is generally required for fixing the motor/gear unit in place. The connection dimensions for connection to the drive head are shown below. The connection to the motor/gear unit depends on the model chosen in each case.

Definition of dynamic load rating C

The radial loading of constant magnitude and direction which a linear rolling bearing can theoretically withstand for a nominal service life of 100 km distance traveled (acc. to ISO 14728 Part 1).

Note regarding maximum load F_{\max}

The maximum loads apply to individual loads. Combining loads decreases the expected service life.

Definition and calculation of = nominal service life

The calculated service life which an individual linear rolling bearing – or a group of apparently identical rolling element bearings operating under the same conditions – can attain with a 90 % probability, based on the materials of normal manufacturing quality that are generally used today and under usual operating conditions (acc. to ISO 14728 Part 1) and optimal installation conditions.

Nominal service life at constant speed

$$L = \left(\frac{C}{F} \right)^3 \cdot 10^5$$

$$L_h = \left(\frac{L}{2 \cdot s \cdot n_s \cdot 60} \right)$$

L = nominal service life (m)

L_h = nominal service life (h)

C = dynamic load capacity (N)

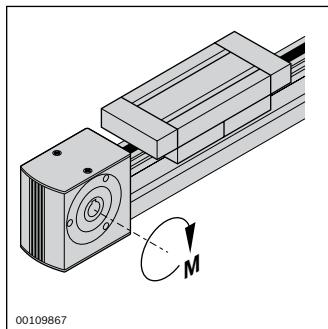

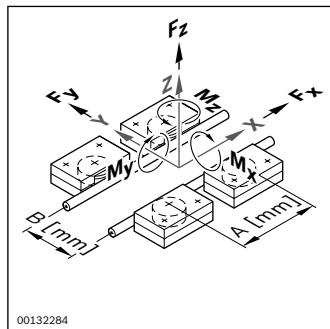

F = equivalent load (N)

s = length of stroke* (m)

n_s = stroke frequency (double stroke) (min^{-1})

*) For $s < 2 \cdot L_1$ (trolley length) load capacities are reduced.

Please consult us.

Load-dependent design

- The specified values are maximum single loads, which are reduced when loads are combined

Notice: If cumulative forces and moments arise in your application and load limits may be reached, please contact your Rexroth representative for consultation in design.

¹⁾ A_{\min} = Length guide bearing

²⁾ Notice: A (spacing of support wheels, see image above) in mm; see below for calculation of B (track width)

³⁾ Maximum values (profile slot load-bearing capacity) are only reached with the following profiles: 45x270; 60x90; 90x90; 90x180; 90x360 (see p. 18-11)

Do not exceed the maximum loading of the screwed connections for rails, carriages and fastenings.
Ensure sufficiently stable basic profile and respective substructure.

Take account of the general service life of lubricants!

Calculating the track width B

$$B = P + 2 \cdot a$$

B = track width (in mm)

P = profile width (in mm)

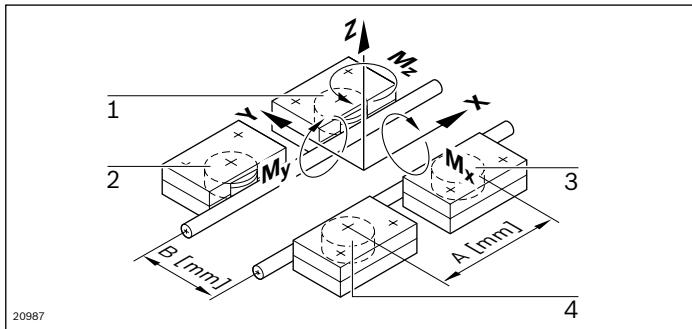

a = rod spacing (in mm)

Values for a:
for LF6C = 9.5 mm (p. 13-13)
for LF12C = 9 mm (p. 13-25)
for LF20C = 15 mm (p. 13-39)

LF ... S

Values for a:
for LF6S = 40 - 6 = 34 mm (p. 13-8)
for LF12S = 90 - 12 = 78 mm (p. 13-18)
for LF20S = 100 - 20 = 80 mm (p. 13-32)

Calculation of load on bearing for a trolley

Loading of the individual rollers

- A mm: Spacing of the rollers' rotational axes
- B mm: Center-to-center distance between the guide rods
- Only compressive forces can be transferred between cam rollers and guide rods in the radial direction.

The following therefore applies in respect of radial forces:

$$F_r \leq 0: F_r = 0$$

- Cam rollers can be loaded equally in both directions. Therefore force F_a is sufficient for calculating P and P_0

Table 1: Load factors for cam rollers

Equivalent dynamic and static loads

To calculate the service life of a cam roller guide, the roller with the greatest load has to be considered.

The following must be determined:

$$P = \max (P_1, \dots, P_4)$$

$$P_0 = \max (P_{01}, \dots, P_{04})$$

Equivalent dynamic load P

$$P = x \cdot |F_r| + y \cdot |F_a|$$

Equivalent static load P_0

$$P_0 = x_0 \cdot |F_r| + y_0 \cdot |F_a|$$

F_r (N): radial load of the roller

The following applies: $F_r \leq 0: F_r = 0$

F_a (N): axial load of the roller

x, x_0 : Radial factor (table 1)

y, y_0 : Axial factor (table 1)

C: dynamic load capacity (table 2)

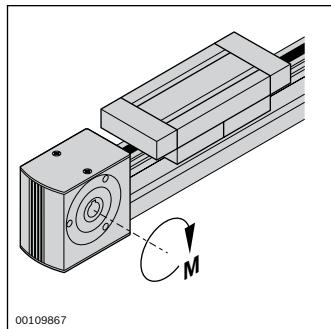

C_o : static load capacity (table 2)

Static safety values:

$$S_0 = \left(\frac{C_o}{P_0}\right)$$

$S_0 \geq 4$ recommended!

Size selection

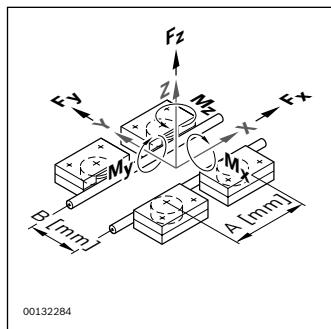

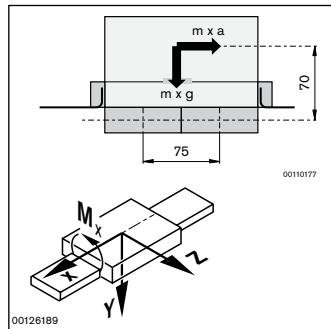

Determining the forces and moments which arise

$$\begin{aligned} F_{x \text{ dyn}}, F_{y \text{ dyn}}, F_{z \text{ dyn}}^1) \\ M_{x \text{ dyn}}, M_{y \text{ dyn}}, M_{z \text{ dyn}} \end{aligned}$$

¹⁾ $F_{z \text{ dyn}}$ includes the weight of the trolley

All the influences must be considered, e.g.:

- Net mass and load
- Acceleration forces and moments
- Process forces and moments
- Loads caused by dampers and/or stops

Determining the permissible forces and moments

For values see p. 13-51

Example

$$\begin{aligned} m = 30 \text{ kg} & \quad a = 2.5 \text{ m/s}^2; \\ L_1 = 150 \text{ mm} & \quad L_2 = 5000 \text{ mm} \\ g = 9.81 \text{ m/s}^2 & \end{aligned}$$

$$\begin{aligned} F_{z \text{ dyn}} &= m \cdot g = 294 \text{ N} \\ M_{y \text{ dyn}} &= m \cdot a \cdot 70 \text{ mm} = 5.25 \text{ Nm} \end{aligned}$$

Selection of the suitable size

$$\begin{aligned} F_{x, y, z \text{ dyn}} &< F_{x, y, z \text{ dyn zul}} ! \\ M_{x, y, z \text{ dyn}} &< M_{x, y, z \text{ dyn zul}} ! \end{aligned}$$

If F and M are cumulative:

In case of higher load, the next size is to be used. In case of doubt, please contact your Rexroth representative for consultation in design.

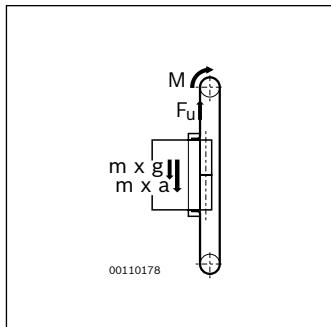

Example of LF 6 S, LF 6 C

$$\begin{aligned} F_{z \text{ dyn zul}} &= 850 \text{ N} > F_{z \text{ dyn}} = 294 \text{ N} \\ M_{y \text{ dyn zul}} &= 0.4 \cdot A = 0.4 \cdot 75 \text{ mm} \\ &= 30 \text{ Nm} > M_{y \text{ dyn}} = 5.25 \text{ Nm} \end{aligned}$$

Example

$$\begin{aligned} F_{z \text{ dyn}} &= 294 \text{ N} < F_{z \text{ dyn zul}} = 850 \text{ N} ! \\ M_{y \text{ dyn}} &= 5.25 \text{ Nm} < M_{y \text{ dyn zul}} \\ &= 30 \text{ Nm} ! \end{aligned}$$

Required drive torque M

$$M = \frac{1}{2} \cdot D_0 \cdot F_u \leq M_{\text{zul}} !$$

Example

$$\begin{aligned} M &= \frac{1}{2} \cdot 50.94 \text{ mm} \cdot 92.35 \text{ N} \\ &= 2.4 \text{ Nm} \\ M &= 2.35 \text{ Nm} \leq M_{\text{zul}} \\ &= 15 \text{ Nm} ! \end{aligned}$$

Components for ESD applications

ESD – Electro Static Discharge

Components which, due to their electrical properties and inner structure, are damaged or destroyed by static discharge also cause economic losses running into millions of euros each year.

You can use Rexroth components for ESD applications to protect your products from this type of damage. Look for the ESD mark when selecting products (Ⓐ).

Standard profile finishing

Standard profile finishing is used for Rexroth connection technology and attachment of accessories:

- ▶ Central bolt (corner connection)
- ▶ Quick connector
- ▶ Bolt connector
- ▶ Cross connector
- ▶ Feet and wheels

The order key has a simple structure:

There are fixed specifications for the parameters for exact finishing of each profile. See table.

It offers decisive advantages:

- ▶ One general material number for all finishing processes at profile cross-sections
- ▶ Available for all profiles
- ▶ Any combinations possible
- ▶ Drilling of blind holes possible

This opens up completely new possibilities!

For information on slot designations and available standard profile finishing, please refer to chapter 2.

Order key for through-holes, blind holes, standard milling:

Material number / length / slot designation = finishing at profile start / finishing at profile end; ...

Order key for threads:

Material number / length / Z = Mx at profile start / Mx at profile end

Aluminum 6063-T6 alloy temperature characteristics

| Characteristic | Temperature range | Observed events |
|-----------------------------|-------------------|---|
| creep/elongation | less than 100° C | No observed increase in the amount of creep. Creep, or plastic elongation, is typically observed at prolonged exposure to temperatures in excess of 100° C. |
| ultimate and yield strength | up to 100° C | Metal retains approximately 95% of its original and ultimate yield strength. |
| | down to -100° C | Metal typically undergoes an approximately 10% increase in both ultimate and yield strength. |

NOTE: Repeated cycling of metal through this type of thermal cycle can lead to eventual fatigue and subsequent failure.
